

Young Technical Services

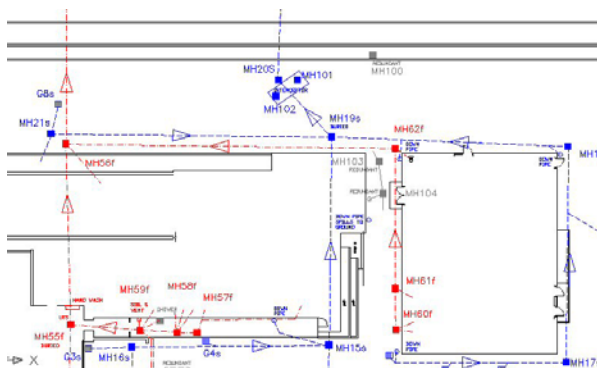

Project; To bring best practice and best value to the management of private drains and sewers.

Young Technical Services are experts in industrial and commercial drainage investigation and management. Whether your driver is IPPC, ISO14001, water minimisation, flooding, or illegal discharge problems we have the experience, knowledge and network of resources to meet your objectives.

Our varied client base includes: An international blue chip frozen food company, a Midlands wide truck sales maintenance and repair group, many end of life vehicle plants, several small component manufacturers, and trading estate management companies to name a few.

Although our client's issues and requirements vary considerably listed below are few of the services most commonly provided:

- To provide accurate plans showing all buildings, features, drains and sewers including roof drainage, gullies, interceptors, manholes and adjacent watercourses.
- To prove the connectivity of the drainage system, identify connections to the public drainage system or watercourses.
- To identify and report on any pollution to the surface water drainage system or water courses and highlight any deficiencies in the drainage system.
- To make recommendations for future maintenance and remedial works.
- To manage or carry out the remedial and maintenance work, including civil engineering, jetting, CCTV, flow measurement etc.

Typical drainage plan

CCTV of interceptor

High pressure jetting
