

Young Technical Services

Expertise outside our usual core services.

Young Technical Services have provided many complimentary services to our core offering of survey, investigation and asset management. We have established a network of specialist contractors, manufactures and suppliers enabling us to deliver a complete solution to our client problems managed through one point of contact.

On completion of a drainage survey of a large food processing plant, we were asked to paint the manhole covers, red for foul and blue for surface water and also to mark the flow direction on the cover. However it was later decided that covers could be accidentally swapped during maintenance so marking the ground next to the cover may be a better solution. We sourced a manufacturer of thermo plastic coloured arrows, guaranteed for 5 years wear and tear, following training we fitted the arrows ourselves.

As a requirement of a trade effluent consent our client was required to take weekly temperature readings of the effluent leaving his site. It was decided that lifting the heavy-duty manhole cover each week was a health and safety risk that should be avoided if possible. We designed, specified, sourced and fitted a manhole cover with a small lightweight easily removable but secure access panel. Enabling readings to be taken safely and easily by one person.

Young Technical Services has also sourced:-
Vactor jetting, mainline CCTV inspection, pipe lining, pipe bursting, water treatment, specialist consultancy services, water sample testing, potable water services, ductile iron manhole and gully covers, environmental audit specialists and specialist civil engineering contractors.
